

Partnership Solutions for
Integrated Fuel Conservation

Flight Sciences International

Dear Airline CEO,

In 1992 I founded Flight Sciences International and developed the first comprehensive program dedicated to **reducing fuel costs an average of 5% or better** for major airlines worldwide and **reduced CO2 emissions by over 26 million tons** in the process. Today, some imitators claim to do what we do for free. Let's be serious—fuel isn't free and neither are **serious solutions**. Our program is about results, which is why our fees are based on your **measurable savings**. If you're serious about reducing your airline's fuel costs, it's time for a **serious conversation** with Flight Sciences International.

Robert E. Callahan, *President*
